Front End Engineer
Udacity
San Francisco

Dear Recruiting Team,

I am writing to apply for the position of Front End Engineer at Udacity advertised on Udacity's website on May 5, 2016. I am a web developer who is eager to use my knowledge and two years of experience to support the next major revolution in online education. I love front-end development and collaborating with people. I have expertise in HTML5, CSS3 and JavaScript technologies and frameworks like Bootstrap and KnockoutJS. I am eager to learn new frameworks and libraries, which will lead to enhancement of my skills. This job is aligned with my interest, experience and goals. Working with Udacity is a dream come true, as I indeed believe in and support online education; it is the best way to connect with young minds.

I recently built a website for college students. Some of the website features are to enable them to see their attendance online, access online notices by the management and connect with faculty members. Some of the technologies I used to build this project are J2EE, MySQL, object oriented programming and MVVM architecture.

In a recent technical fest at Ramswaroop University, I coordinated a "Spell Bug" event for final year students. Event was distributed in three rounds my responsibility was to shortlist students on the basis of their performance and send them to next round. I supervised the event properly using leadership skills to solve a problem and ensured that event is a huge success. This leadership experience will help me during the job to take up initiative and lead my team. Moreover I am really excited and looking forward to grab this opportunity as it is a very encouraging and goal-oriented job. I believe in setting goals and fulfilling them in time.

Lastly, working with Udacity would help me achieve my goals personally and professionally. I would love to contribute in the field of education and technically get to learn new things that will help in my career growth. Thank you for your time and consideration.

Regards,

Radhika Jaju
